WORK EXPERIENCE

ThinkBiz Technology Pvt Ltd: Junior Python/A Developer

May 2024 - present

- Developed and deployed live products utilizing OCR technology and large language models (LLMs) such as GPT.
- Improved data extraction accuracy and natural language processing capabilities using advanced AI techniques.
- Collaborated with cross-functional teams to integrate AI solutions seamlessly into existing systems.

Institute for Plasma Research: Project intern

Jan 2024 - May 2024

- Project Title: Optimized LSTM-based Deep Learning Model for Real-Time Plasma Disruption Event Prediction
- Developed and optimized an LSTM time-series model for predicting plasma disruption events in tokamak fusion reactors.
- Utilized recurrent neural network architectures (CRU, attention mechanism, auto-encoder decoder, transformer) to extract features and improve prediction accuracy from complex plasma current disruption data.
- Achieved significant improvement in model accuracy through optimization techniques, enabling real-time deployment on a dedicated server for early disruption warnings.

PROJECTS

Automatic CAPTCHA Recognition

- Successfully built and trained an OCR model using TensorFlow & Keras.
- Implemented a CNN architecture with multiple Convolutional and Pooling layers to extract features from CAPTCHA images.
- Project focused on breaking down captchas into individual characters for improved recognition.

Ministry of Education

- Designed and implemented a PostgreSQL database.
- Created an user-friendly interface using Tkinter in Python.
- Utilized psycopg2 library to connect Python with the PostgreSQL database.
- By implementing these features, users can able to search and retrieve student information, generate reports on attendees of teachers and students with minimal training.

EDUCATION

Nov 2020 - present	B.Tech (Information and Communication Technology) at Dhirubhai Ambani Institute of Information and Communication Technology (DA-IICT)	(CGPA: 6.2/10.0)
June 2019 - May 2020	Class 12th GHSEB	(65.83%)
June 2017 - May 2018	Class 10th GSEB	(93.67%)

SKILLS

Python	Machine learning, Deep learning, OpenCV, Computer Vision, Flask, Prompt Engineering, GPT4o
C/C++	Data structures and Algorithms, Object-Oriented Programming
SQL	Database management system, MySQL
Tools/Technologies :	VSCode, Git, Jupyter notebook, Google colab, pgAdmin
